

## Pulsa PV Joule Pulsa PV 260W

high performance ac solar module

### AC Advantage

- High efficiency solar module integrated with a Joule Microinverter, the world's most efficient AC system solution
- Optimized for higher output in low light conditions
- Individually optimized module
- Eliminates module mismatch loss
- Shading affects only the shaded panel, not the entire system

### Safety

- No high voltage DC wiring
- Fire Prevention – No risk of DC arc faults
- ETL Certified AC Model – No separate grounding electrode conductor (GEC) require

### Intelligent

- Performance monitoring & system management
- Maximized system up-time with remote diagnosis and resolution
- Quick and simple design, installation and management
- Provides solar system performance information, analytics and automated alerts
- The microinverter bracket is engineered for a safer more secure connection to the module

### 260W Microinverter

The integrated PV Microinverter, instantly converts DC to ready to use AC power.
